

Introducing the AirMed Ecosystem

We're changing the way the cannabis industry buys technology

To help our clients cultivate success, AirMed has developed strategic partnerships with leading vendors of equipment, supplies and services. Our AirMed Ecosystem lets you purchase hardware and software in a turn-key solution for your cannabis business.

The AirMed seed-to-sale solution offers the widest range of features in the industry. Our software manages all the processes and tasks for the production and sale of cannabis in Canada and provides the tracking necessary to meet compliance of both Health Canada's ACMPR regulations and the Cannabis Act. But AirMed goes beyond that to help your team accelerate and optimize your production and profitability.

The AirMed Ecosystem is designed to help licensed producers cultivate success with a pre-configured, fully compatible business solution that includes industry-leading hardware and software. Our goal is to help our customers reach their potential in all areas of their businesses by providing the best solution to cultivate success. Each product has been carefully selected based on its ability to provide value, lower production costs and increase competitiveness.

We recognize that there is a dizzying selection of products to serve the Cannabis market. Thus, we have scoured the market for industry-leading equipment, software, consultants, and related products and services that will help our customers operate at peak potential. Each solution we recommend is extensively researched and validated in the industry. Where necessary, custom integrations are developed with the AirMed platform.

Each product selected for the AirMed Ecosystem is carefully chosen based on its ability to provide value, lower production costs and increase competitiveness for AirMed customers. You create the package that's right for you from pre-configured hardware and software.

Introducing Our Ecosystem Partners

Following are just a few of the industry-leading suppliers who have joined our AirMed EcoSystem.

Environmental Chambers

Our partners include Darwin Chambers, a designer, manufacturer and installer of controlled environmental chambers that offer precise control of temperature, humidity, gas, and lighting. These chambers are ideal for cannabis production.

Industrial tablets

AirMed recommends industrial tablets for use in your cannabis business. These ruggedized hand-held devices are waterproof and dust proof and can withstand a drop from five feet on a concrete floor. They have a built-in barcode scanner and camera and come loaded with Windows 10. The tablets feature a docking station with USB ports for printers, scales, keyboard, mouse and other peripherals.

These preconfigured tablets function as a self-contained workstation to carry out all process-related tasks. They can be integrated with barcode software to capture data throughout your operations. A tablet can serve as the computer for a specific work area such as a nursery or mother room, grow or drying room, laboratory, warehouse or loading dock.

Scales & Moisture

Accuracy and precision are critical in weighing cannabis products. For both accuracy and precision, AirMed recommends measuring technology from A&D Scales.

A&D provides technology to meet customers' requirements with professionalism, competence and the highest degree of ethical standards – all in accordance with best industry practices and the current requirements of ISO 9001, ISO 17025 and Measurement Canada. We can provide a variety of legal-for-trade scales that range in precision, capacity, readability and size.

Printers

Zebra engineers scanners, mobile computers, tablets and printers with one purpose: to help you perform even better. Zebra empowers those on the front line in retail, healthcare, transportation, manufacturing and other industries to achieve a performance edge. As the pioneer at the edge of the enterprise, Zebra products, software, services, analytics and solutions are used to intelligently connect people, assets and data. zebra.com

A division of Stover Manufacturing, Cannabis Labeling Products offers thermal tagging for small to large cannabis growing or cultivation operations. The CannaTag Printing System saves time, money and valuable resources when it comes to mandated compliant labeling requirements. Horticultural-grade products include modified thermal printers and high-quality weather proof thermal tag and labels. cannatagsystem.com

Environmental Sensors

Cannabis crops require a precise balance of light, temperature, CO₂, water, and soil conditions to thrive and produce maximum yields in both quantity and quality. Growers need a fiscally sustainable way to manage and scale their operations while tracking and adjusting overall growing conditions.

SensorInsight and AirMed have collaborated to provide a precision, indoor growing solution, offering hardware configuration, data integration, and analytics.

Our goal is to create the optimal connected grow operation and improve crop decision-making using real-time environmental data. All sensors and kits come preconfigured to send data automatically to the SensorInsight platform and into the AirMed cloud. Monthly data fees include access to the platform for review with support for setting up users, dashboards, and alerts on your growing needs. Installation support and solution deployment services are available.

Pathogen Detection

AirMed and PathSensors are working together to offer an innovative and cost-effective solution for pathogen detection and treatment with unparalleled control and precision to drive higher revenue. CANARY (Cellular Analysis and Notification of Antigen Risks and Yields) is a cell-based biosensor technology that delivers extremely rapid detection of pathogens at previously unseen levels of sensitivity and specificity. Originally developed by scientists at MIT Lincoln Laboratories to combat bioterrorism threats, the CANARY technology has been adapted by PathSensors for applications in agriculture and food safety.

PathSensors' BioFlash® Biological Identifier is highly-portable and incorporates a high-volume, high-performance aerosol sampler for indoor/outdoor applications. Incorporating the CANARY® technology, the BioFlash® Biological Identifier provides rapid, sensitive and specific identification of biological threat agents and other pathogens including toxins.

The Zephyr Pathogen Identifier uses CANARY® detection technology to screen for pathogens in liquid and powder samples. The Zephyr platform is ideal for users who need rapid, accurate results, and who test lower volumes of samples (<40 tests/day).

Technology Implementors

The cannabis industry is growing rapidly, which poses many challenges to cannabis businesses. GeekTek has specialized knowledge and experience in the cannabis industry as a managed service provider. We provide excellent cannabis technology solutions by remaining flexible, transparent, and adaptable at each stage of your growth cycle. Whatever your growth plans are in this dynamic and exciting market, we have your back while you stay focused on the next opportunity. With so many challenges cannabis businesses face every day to meet compliance and earn profitability, data security may seem the least of your worries. But as your business creates and stores sensitive data, cybercriminals will increasingly target your operations, your IP, your internal documents and you personally if they aren't already.

Quality Management Solution

Isolocity provides full-service consulting for ISO and GMP certifications in addition to our cloud-based all-in-one compliance management solution. Our expertise and software provides a customized approach to cannabis compliance that is aimed at reducing the resources needed at every stage of the process. Isolocity is here to help organizations adapt, automate and grow to meet the needs of industry regulations. isolocity.com

Payment Solutions

With more than 10,000 employees worldwide, Global Payments Inc. (NYSE: GPN) is a leading worldwide provider of payment technology and software solutions. Global Payments technologies, services and employee expertise enable the company to provide a broad range of solutions that allow customers to accept various payment types and operate their businesses more efficiently across a variety of distribution channels. globalpaymentsinc.com

Shipping Solutions

Pineapple Express Delivery offers a personalized experience for its customers and has established in-depth security and delivery protocols to facilitate same-day delivery of medical cannabis across the country. PE is dedicated to providing a fully integrated, simple to use, same-day delivery platform. The Pineapple Express Delivery management team has more than 10 years experience. pineappleexpressdelivery.com

Purolator is a leading integrated freight, package and logistics solutions provider with one of Canada's most extensive transportation networks and supporting infrastructure. Purolator has more facilities in more regional centres than any other freight and parcel solutions provider in Canada. From timely, dependable package delivery to integrated distribution, Purolator is well-equipped to meet the high-volume demands of its customers. purolator.com

Marketplace Platform

Craft Depot is a platform where micro cultivators of cannabis can sell to standard cultivators, processors and distributors. Through Craft Depot's online marketplace, micro cultivator crops are instantly accessible to many buyers – ensuring the best price. Craft Depot offers the ability to bring entire crops to the retail market through a variety of legal purchasers, empowering micro cultivators to remain independent. craftdepot.ca
