

# Helping Micros Cultivate Success

## *An affordable technology solution for micro producers*

We've made it our business to understand the needs of micros and have developed affordable business technology for you. Our micro rates give you a seed-to-sale solution that is sustainable for small operations.

AirMed Cloud software integrates all business resources and functions from facilities and inventories through to financials and personnel management. With unique features designed specifically for the cannabis industry, AirMed unifies operations in a streamlined interface to let you focus on optimizing your business while managing all aspects of compliance.

Workflows, fine-tuned for the way micros operate, are easy to learn and simple to use. AirMed's flexibility lets you manage individual plants or groups of plants at any point in the growth and drying process. Manage batches across multiple rooms and move or harvest plants individually when they're ready. You can even turn off parts of the system that you're not using so users can navigate processes easier. Data visualization tools provide insight for quality, yields, sales and profitability for unmatched business intelligence. And AirMed automates much of the work for Health Canada CTLS, StatsCan, and CRA monthly reporting with pre-built compliance reports updated as regulations change.

But our commitment to helping micros succeed doesn't stop there. We've sourced hardware from our Ecosystem partners for a turn-key technology solution that provides affordable equipment to help you increase efficiency and profitability. Our services partners are available if you need help at any stage from licensing through quality management and beyond.

*When time and resources are at a premium,  
AirMed is the best value for your small business.*

# Cultivate Efficiency, Insight and Profits

## AirMed Cloud Software

A streamlined interface lets you focus on optimizing your business while managing all aspects of compliance.

- ✓ Growing & crop management
- ✓ Quality control & laboratory information
- ✓ Processing & manufacturing
- ✓ Sales & shipping
- ✓ Staffing & learning management
